## LANGUAGES

English, Hindi, Odia

## **Lightning Charts — (Typescript, Angular) - Finland**

- Pie Chart
- Funnel Chart
- Pyramid Chart

→ The lightning chart is a chart library that can be used in web development. It contains lots of chart applications and JavaScript-based design templates for typography.

## **Genius App — (Angular) - Canada**

- This is a web application used creating CRMS for web applications. There are two different phases of the application.
  - App builder
  - App Runner.

App Builder side, which is the parent web application from where we are creating JSON data for new applications, pages, and components. The JSON is used by another phase of the application i.e App Runner side. The JSON data which is created by the builder side is consumed in this phase for the rendering of the application along with its pages and respective components.
